

## 1 Target

The target of this energy policy is the definition of the energy principles for the Austrian site as well as its communication to the employees.

## 2 Scope

This policy is valid for the site Austria.

## 3 Basic principles

The energy policy is part of the **STÖLZLE** Management System. It is defined in compliance with the company corporate principles and the requirements of the ISO 50001. As a manufacturer of environmentally friendly glass containers it is an important part of the corporate policy to admit to the basic elements of the ISO 50001 and to implement the requirements.

Our energy related principles derive from this:

- we determine the energy consumption and commit ourselves to a continuous improvement of the energetic performance
- we commit ourselves to ensure the availability of energy relevant information for the Corporate Management and employees, authorities, customers and certification bodies
- we commit ourselves, that the necessary resources are provided to achieve the energy relevant targets
- we commit ourselves to comply with the corresponding legal requirements
- we commit ourselves to support the purchasing of energy efficient products and to consider energy relevant criteria in the planning of production processes as well as new constructions and rebuildings
- we commit ourselves to the regular review of the suitability and the achievements within the Energy Management System

## 4 Responsibilities

The Corporate Management has nominated a representative for the introduction, implementation and maintenance of the Energy Management System
